# USE CASE DIAGRAM

USE CASE DIAGRAM DESCRIPTION

The Use Case diagram of the Quick Cart system represents the interaction between users and the system's core functionalities. The primary actors include the Customer, the Admin, and an external Payment Gateway. The Customer performs activities such as browsing products, adding items to the cart, viewing the cart,updating or removing items, proceeding to checkout, and making payments. The Admin controls product management activities like adding, editing, and maintaining product details. The Payment Gateway acts as an external system responsible for processing online payments. Overall, the Use Case diagram visually explains how users connect with the system and what operations are available to them.
